EXPERIENCE

Finclusion Solutions Pvt Ltd, Mumbai – Backend Developer

JULY 2021 – PRESENT

- Designed and developed microservices architecture using Node.js, enhancing the scalability and modularity of the insurance product.
- Implemented Keycloak for secure identity and access management, ensuring data privacy and compliance with industry standards.
- Conducted rigorous unit testing, guaranteeing the reliability and functionality of backend services, and achieving a 98% test coverage rate.
- Collaborated closely with Business Analysts (BAs) to understand business requirements and translate them into technical specifications, facilitating effective project execution.
- Worked in tandem with peer developers to create and refine insurance product workflows, improving overall efficiency and customer experience.
- Successfully integrated a new insurance product into the existing system, streamlining the onboarding process and expanding the company's product portfolio.
- Created a Proof of Concept (POC) for claims settlement using the Camunda workflow engine, demonstrating the feasibility and efficiency of automated claims processing.
- Integrated third-party APIs to enhance product functionality, including real-time data retrieval and payment processing, resulting in a seamless user experience.
